

Technical Information
Valencia Spanish S-Tile Eave Closure
December 1, 2008

At the request of our customers, Entegra has made the following changes to our Valencia Spanish S eave closure. Since we retooled the Spanish S-tile, we periodically would receive complaints, that the first course of tile was too hard to hold the alignment with the side inter-lock.

Our Valencia Spanish-S eave closure previously had a pitch of 9" from tile to tile. See detail # 1. The eave closure being supplied today is now being produced using an 8 ¾" spacing from tile to tile. This requires that when snapping the vertical lines on the roof deck for installation of the field tile (every other vertical course) the spacing should be, 17 ½ inches. See detail # 2.
